I have not yet heard back from Jay on my latest questions.

Thanks. Sounds good.

As part of the alternatives analysis, do you know if they looked at burial of the lines in new areas (forested areas that do not currently have any transmission lines) and how that changes the impact numbers?

Does MEDEP use the same secondary impacts numbers as we do, or will they be doing a separate calculation for us on this?

Take care, Mark

A good question. We have yet to call the application complete for the simple fact that they keep changing things, one of the more recent things, deciding to drill the line under the Kennebec River (in order to avoid some high visual impacts). They also are still in data acquisition mode - getting info on lynx cover habitat and state and federally listed plants to name a few things. So between now and the end of the month I've got to re-review all of the tons of application materials to see where they are. My guess - seems like a federal agency briefing might be in order, perhaps as early as December but more than likely the first of the year.

A lot of the issues however, remain firmly in the authority of the DEP and LUPC, our jurisdictional impacts are pretty straightforward in my opinion.

Jay

Hi Jay,

Any sense on where this is at for 404 stuff that you and I would review?

Thanks, Mark
